

**Dr. Pham Ngoc Doanh**

Senior researcher

Vietnam Academy of sciences and technology, Vietnam

---

I have been working on parasites as a senior researcher of Institute of Ecology and Biological Resources, Vietnam Academy of sciences and technology, since 1994. I obtained DVM degree from Hanoi University of Agriculture and MSc degree in biology from Thainguyen University. Then I completed PhD degree in 2009 and post-doctoral program in 2012, funded by Japan Society for the Promotion of Science (JSPS), in the field of parasitology, at University of Miyazaki, Japan. My main interest is parasites of animals and humans, in the field of morphological and molecular identification, biology and immunology. I am particularly interested in zoonotic parasites, such as Paragonimus, Fasciola, Clonorchis.... In the past years, I have been focusing on Paragonimus, I and my colleagues published more than 20 papers on Paragonimus in peer-reviewed journals and some chapters of handbooks.
